

7 Reasons for MultiCash On

Why Omikron's MultiCash On should be your first choice for your corporate online banking

Provide a central digital touchpoint to the bank's services

Omikron's MultiCash On product suite for internet and mobile applications offers a full range of Transaction Banking services, flexibly designed for all devices to ensure a smooth customer journey. Users are welcomed with their own personal dashboard, can tailor their own reports as needed, move easily between current and historical data, or quickly locate information via powerful filtering and search functions. In the often-complex world of payments, all specific checks and validations run in the background, while an intuitive navigation guides users intelligently to complete all relevant fields. The open design allows real-time services and bank-specific forms and reports to be onboarded easily, resulting in a rich, innovative and individual proposition for corporate clients. Third-party APIs may be consumed and exposed to clients, and a flexible interface is available to deliver any services to Third-Party Providers, as needed.

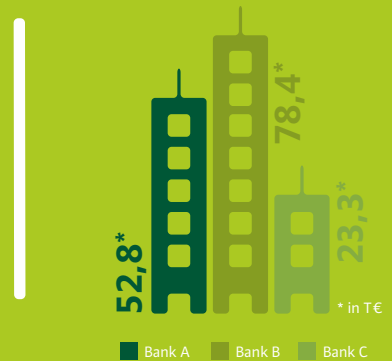

The solution can be operated on-premise or as a service within the Omikron Cloud.

We provide you 7 reasons why you should use MultiCash On as the online and mobile solution for your corporate clients.

LIQUIDITY FORECAST

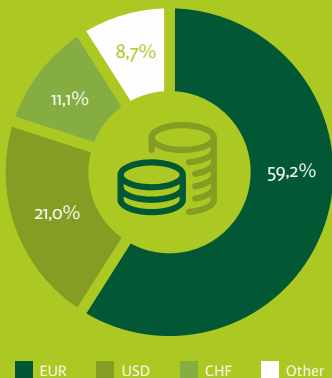

CURRENT CASH POSITION

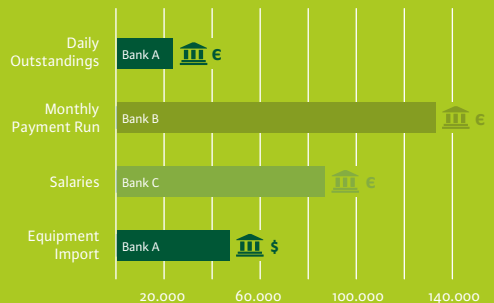

PERSONAL DASHBOARD

FOREX EXPOSURE

PENDING PAYMENTS

7 Reasons for MultiCash On

AN INTUITIVE CUSTOMER JOURNEY

MultiCash On was designed with a consistent user-centric approach, improving the transparency and efficiency in the daily work processes of your corporate clients. Users are welcomed with their own personal dashboard, comprising a summary view of the main interests and activities. Based on input from our widespread corporate user community, powerful viewing and analytical options have been implemented, including the capability to work with multiple sets of data in parallel and tree views for fine-tuning reports. Other features include interactive forms, with active helps and tooltips for guidance, transparent warnings / messages in case of incorrect entries and real-time alerts and notifications.

DESIGNED WITH YOUR MOBILE IN MIND

The responsive design ensures that a user can work with different devices (desktop, tablet, smartphone) and directly recognize the application. For mobile devices, the MultiCash On App (maintained for iOS and Android) provides the direct complement to the internet banking application. Any single user can also work with multiple authorization devices, using the credentials across all devices.

GEARED FOR CORPORATES

To meet the high expectations of today's corporates, MultiCash On combines a rich and granular level of detail with the flexibility for users to tailor all reports and screen views, including real-time updates, to their personal needs. Financial managers particularly appreciate the Cash Manager, providing a customizable forecasting option and a liquidity planning tool to ensure cash shortfalls are avoided. Customizable import and export interfaces ensure a seamless interaction with ERP, Treasury and other in-house applications.

POWERFUL TRANSACTION BANKING ENGINE

Handling payment flows, whether domestic or cross-border, bulk payments or one-off transfers is transparent and straightforward. With Omikron's unique „Smart Payment Window” approach, all country-specific functions, features and validations run in the background. This ensures that clean payment files are generated which banks can directly process. Intuitive navigation guarantees that users are guided intelligently to complete the relevant fields. The asynchronous design ensures that even very large payment files can be uploaded or imported for checking & authorizing – without blocking the user from other activities.

7 Reasons for MultiCash On

FLEXIBILITY TO CONNECT ALL YOUR DATA

Beyond typical transaction banking services, each bank provides a range of individual services which are often highly specialized and depend on the information which is required by the core banking system (content and format). To support this, Omikron has a concept for „Smart Integration“, designed to be highly flexible, exploiting real-time options wherever needed. New services can be launched quickly and with a minimum of integration effort. Typical use cases include a connector to visualize and interact with your existing card management, loans, guarantees services and your cash liquidity report systems.

MULTIBANKING APPROACH

Today's corporates are increasingly looking for banks who can provide a central entry point for digital banking, aggregating account information and supporting transaction initiation from all the corporate's banks. Seamlessly integrated in MultiCash On, a Multibank Connector uses EBICS, MCFT and other market standards to connect all banks. Users can then run a consolidated cash management and initiate payments for all banks and accounts. Now you can get back in control and be the hub for your corporate clients.

EMBEDDED IN A POWERFUL OMNI-CHANNEL PLATFORM

Within the bank's infrastructure, MultiCash On is supported by Omikron's omni-channel MultiCash Communication Platform. Alongside online banking, clients can use one or more additional e-channels, e.g. EBICS, MCFT or PSD2-compliant APIs. All key functions (e.g. permissions, validations, workflows) are consolidated for all channels. An integration framework embeds the delivery channels deeply within the bank's environment. The forward-looking approach to open banking includes integration of APIs at all levels: to support open interfaces for third-parties, to consume and deliver external services to clients and, if required, to integrate Omikron's solution within a wider bank portal.
